AMENDMENTS TO THE SPECIFICATION

Please amend the specification in the following manner.

On page 1, following the application title and before the paragraph having the heading "Technical Field," please add the following new paragraph:

RELATED APPLICATIONS

This application relates to U.S. Pat. Appl. Serial No. 09/885,746, entitled "Methods and Apparatus for Generating a Multiple Composite Image," and U.S. Pat. Appl. Serial No. 09/885,686, entitled "Methods and Apparatus for Producing a Lenticular Novelty Item Interactively Via the Internet," each of which was concurrently filed herewith.

Please replace the paragraph on page 5 beginning at line 12 with the following amended paragraph:

A more detailed block diagram of a client device 202 is illustrated in FIG. 3. Preferably, the client device 202 is a personal computer (PC). However, a person of ordinary skill in the art will readily appreciate that many different computing devices may be programmed to perform the functions of the client device 202. The client [[102]] 202 includes a controller 302 which preferably includes a central processing unit 304 electrically coupled by an address/data bus 306 to a memory device 308 and an interface circuit 310. The CPU 304 may be any type of well known CPU, such as an Intel PentiumTM processor. The memory device 308 preferably includes volatile memory and non-volatile memory. Preferably, the memory device 308 stores a software program that interacts with the composite image generator 112 as described below. This program may be executed by the CPU 304 in a well known manner. The memory device 308 may also store digital data indicative of documents, files, programs, web pages, etc. retrieved from a composite image generator 112 and/or loaded via an input device 312.
